

Subject – Job Application: <https://www.uber.com/en-IN/careers/list/39268/>

Dear Team,

I would like to be a part of one story which would leave a footprint in whole world and drive to the next innovation of human history . I have come across a position in your organization which is completely matching with my skill sets and experience. I am attaching my latest CV along with this cover letter. I believe, I am great fit for this position because of the following reason...

1. I am passionate about finding a ways to improve the software quality, reduce the software development cost, and immediate release with the help of latest devops tools, practices and process.
2. I have in-depth hands-on experience on latest development/operations tools which can be used in software development and production environment.
3. I have mentor/coach more than 5000 engineers till now for implementing CI/CD, DevOps and helping organization to find best tools for their SDLC and productions needs.
4. I am managing a team of 15 people with their direction of software development, maintenance and innovation at work.
5. I have less experience in people management but I strongly believe that manager is the first person who postmortem and validate first, before giving guidance and co-ordinating to their fellow engineers and I have been always working in a such environment.
6. Every organization has unique culture, process and practices and I take very less time adopting the values of organization and learn, excel.

I have also learnt that, there are two great minds who are currently working in Uber NL and USA has very close relationship with me.

Vik A. Dua

Experienced Strategy Manager/Risk & Compliance Professional

<https://www.linkedin.com/in/vik-dua/>

Relationship – He is the best friend who knows me from last many years personal and professional.

Guiding me and mentoring me at all stage of life.
